INTRODUCTION

Beyond Spectrum is a music game that enables you to play with your own songs.

- ◆ Maps are generated according to the music file.
- ◆ Every single play is different from each other though they uses the same song.
- ◆ Variable colors form a spectrum-like interface.
- ◆ Can be used as a music player.

PART 02

View

View

textView

ListView

Button

Create the view

Change the color of buttons

Create the view (in .xml file)

01

Create 12 buttons

Six for user's touch, Six for animation

02

Create a progress Bar

To show the left time

03

Create 3 textviews

Two for the score, one for the preparing stage

	R	G	B	值		R	G	B	值		R	G	B	值
黑色	0	0	0	#000000	黄色	255	255	0	#FFFF00	浅灰蓝色	176	224	230	#B0E0E6

桔红	255	69	0	#FF4500	孔雀蓝	51	161	201	#33A1C9					

Change the color of buttons

Use `setButtonColor()` function

1. Determine the range of the color.
2. Use `Math.random()` to create integer number
3. Transform this int number to hexadecimal String
4. Create hex code.

```
btn.setBackgroundColor(Color.parseColor("#"+Integer.toHexString(-random-plus[0])))
```

5. Create another 5 random color.
6. Use `setBackGroundColor()` to set the color of buttons.

PART 03

Controller

Create Animation

Set OnClickListener

Set Property of ProgressBar

Create Animation of the View

01

Save the view as a variable

```
btn1=(Button)findViewById(R.id.button);
```

02

Use ObjectAnimator to create Animation

```
ObjectAnimator heightAnimator=ObjectAnimator.ofFloat(btn,"y",100f,900f)  
    .setDuration(3000);
```

Set OnClickListener of Button

(set command when button is clicked)

01

Command one:

Use animation to create cartoons of the button.

02

Command two:

Count the score.

Get the height of bar. Then calculate the score to show on the TextView.

Set property of the ProgressBar

01

Show the progress of the song

Get the data of time. Then change it into the progress to show on the ProgressBar.

```
if(pb.getVisibility()==View.GONE) pb.setVisibility(View.VISIBLE);  
pb.setProgress(newProgress);
```

02

Give the end sign

When progress is 100, the game is over, then it will show the mark “game over”

PART 04

Model

Structure

Decode the file

Use Audio Decoder jmp123 to decode the mp3 file.

Fetch the data

01

Create a two-dimensional array

```
float v[][] = new float[b.length/4/1000+1][1000];
```

02

Change byte data to float data and save them in the array

```
v[i][j] = Float.intBitsToFloat(getInt(b, index));
```

Find the beats

01

Create a class which can save the time and average volume of a beat

```
public class Beat {  
    public float time;  
    public float average;  
}
```

02

Create a Beat array to save the beats

```
Beat beats[] = new Beat[v.length];
```

Find the beats

03

Use the library Minim to judge when beats occur in the music and save them.

```
for (i = 0; i < v.length; ++i) {  
    beat.detect(v[i]);  
    if (beat.isOnset()) {  
        beats[k].time = i*1000/44100;  
        sum = 0.0;  
        for (j = 0; j < v[i].length; ++j)  
            sum += v[i][j];  
        beats[k].average = sum/v[i].length;  
        ++k;  
    }  
}
```
